

AC-DC Motor Repair Standards Plus Two Pole Motor Repair Solutions

This three day course is a perfect fit for anyone who is responsible for maintaining, trouble shooting, repairing, or testing alternating or direct current motors. The course places special emphasis on two-pole induction motor repair solutions, as well as providing the fundamentals of developing motor repair standards for testing and measurements. You will learn: Insulation Resistance Testing, Laminated Core Testing, Rotor Bar Testing, Air Gap Certification Impedance Testing (Voltage Drop), Phase Resistance and Inductance Testing and more.

Paid attendees receive a course workbook that includes all the material covered in the workshop — a great manual for future reference. Course certificates for all attendees will be awarded upon completion of the course.
