

# MCEGold 3.1.2 SP3 Highlights

## Main Features

We continually focus on providing our customers with the most secure operating environment possible. MCEGold 3.1.2 SP3 implements several new features designed to improve the security and performance of our software and test equipment.

The first feature is the implementation of a Microsoft Certified USB Driver. This not only improves security but, makes installation of MCEGold on Windows 10 easier by eliminating the need to use the Disable Driver Enforcement Mode during installation.

The next feature is the upgrade of SQL 2008Express to SQL 2017 Express. SQL 2017 Express improves security and PdMA Cloud Performance.

We also upgraded the MCEGold Installer to make installation of MCEGold easier for our customers. Test History for EMAX has been optimized for improved load times. This optimization will especially benefit our PdMA Cloud customers.

The last security improvement is that MCEGold 3.1.2 SP3 is only Windows 10 Compatible. To provide our customers with the highest level of security possible, we are following Microsoft's end of security update support for Windows 7 in January 2020. Thus, MCEGold 3.1.2 SP3 is not compatible with Windows 7.

## Fixes

- We fixed a bug in which the Fault Zone Report would fail to populate data in list view for Wound Rotor Motors.
- We fixed a small bug in Account Manager where on rare occasions users would not show up in Account Manager.
- We fixed a bug that prevented web services from exporting some assets to PDP files.
- In certain cases, a bug caused an error when attempting to view a history chart when there were no tests in test history
